EICAS Now Certified for B757/B767 Flat Panel Display System

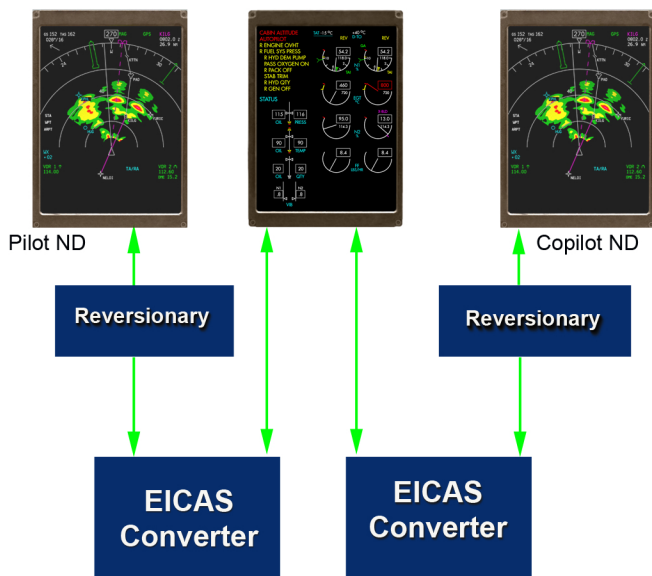

Innovative
Solutions & Support

Innovative Solutions & Support introduces a digital Engine Indicating and Crew Alerting System (EICAS) as an enhancement for its B757/B767 Flat Panel Display System. The IS&S EICAS adds a center display that is the same part number as the installed FPDS system displays, 2 scan converter modules that plug directly into the CRT connectors with output to EICAS display and Navigation Display (ND) and a modified center cockpit panel with EICAS display mounting plate to ensure a rapid installation. There are minimum training differences as the single IS&S display will display what the current CRT EICAS displays. In the event of an IS&S display failure either one of the two pilot's ND's automatically serve as the backup EICAS display.

With the development of an EICAS, the IS&S B757/B767 FPDS continues to evolve and now offers operators an integrated display providing engine instrumentation and crew alerts. The IS&S B757/B767 FPDS is the premiere retrofit cost efficient solution for operators as requirements for safety, air traffic management, fuel savings and environmentally friendly aircraft increase.

IS&S EICAS DISPLAY

- Simplifies Flight Deck
- Removes additional 40 lbs. of equipment
- Fuel Savings
- Improves Reliability
- Reduced Power Consumption
- Enhanced Readability
- Resolves CRT Obsolescence Issues
- Reduced Maintenance Costs
